

# IFPE & CONEXPO-CON/AGG

We planned to exhibit at IFPE, the biggest International Fluid Power Exhibition that had place in Las Vegas (US) each 3 years, but unfortunately due to Covid-19 risks, we decided to cancel our participation to this event.

IFPE was scheduled on March 10-14, 2020 together with CONEXPO, North America's Largest Construction trade show.

We were excited to present our NEW hydraulic valves AMES series (link alla pagina AMES), the first stainless steel valves with 3D printed body, suitable for corrosive environments, such as chemical plants, oil & gas and marine applications. We design and produce many other parts with Metal Additive Manufacturing : manifolds, heat exchangers, impellers, valves components,... We also planned to show the NEW API20 (link alla pagina API20) and mono block (link alla pagina monoblock)
